

# Room[type]Width Field

**Field Name (Standard Name)?:** Room[type]Width

## Definition (May contain rules that must be observed)

[type] This field is a repeating element for each type of room selected in the RoomType field. For every RoomType there are two possible implementations. For a flat implementation (RETS 1.x only), each RoomType used is expected to appear as the "[type]" in the related rooms field name. i.e. RoomKitchenWidth. A relational implementation of rooms must omit the type from the field name and use RoomType to create a vertical representation of the various rooms. i.e. RoomWidth with Kitchen in the relational table's RoomType field.
